Insight dan rekomendasi dibuat berdasarkan data penjualan saja, tanpa ada data lain seperti data eksternal (kompetitor, kondisi pasar, ekonomi regional) dan data internal (stok dan lain-lain), atau ngobrol dengan stakeholder.

// english

These insights and recommendations are based only on sales data. I did not use other information such as external data (competitors, market trends, or regional economy) and internal data (stock levels or other company records). This analysis was also done without any discussions or feedback from stakeholders.

Insights:

// indonesia

1. Tren & Performa Tahunan

Bisnis mengalami lonjakan terbesar di tahun 2017 sebesar 136%, sedikit mengalami penurunan di angka 22% pada tahun 2018. Pendapatan terbesar bisnis terjadi di April 2018 dengan angka pendapatan mendekati \$400,000 dan bisnis memiliki pola konsisten kenaikan pada Q1.

Namun, bisnis mengalami penurunan yang sangat drastis pada tahun 2019 dengan penurunan sebesar -46% (kehilangan potensi \$1,36 juta). Penurunan ini akibat hilangnya 90% aktivitas pelanggan secara bertahap, di mana pesanan turun dari 41 di bulan Maret hingga hanya 4 pesanan di akhir tahun.

2. Wilayah (Lokasi Pelanggan)

Sekitar 69% pendapatan perusahaan bergantung penuh pada customers di New York. Masalahnya, pada tahun 2019 terjadi penghentian belanja secara masif (drop 80% hingga 100%) di kota-kota NY seperti Baldwinsville, Howard Beach, hingga New Rochelle.

Kondisi ini diperparah dengan ikut turunnya performa di California dan Texas yang masing-masing memegang market share 20% dan 11% juga ikut turun. Puncaknya terlihat di kota San Lorenzo (CA) dan Houston (TX) yang penjualannya turun total (turun 100%). Karena semua wilayah kompak menurun, perusahaan tidak memiliki buffer, sehingga cash flow nasional langsung lumpuh total.

3. Brand

Hampir 60% revenue bergantung pada Trek, ketergantungan ini langsung terlihat dampaknya ketika penjualan Trek turun -44% di 2019. Kondisi makin parah karena semua brand lain turun juga, Ritchey dan Pure Cycles turun sampai lebih dari -70%.

Namun, Trek tetap jadi penyumbang revenue terbesar pertama dan Electra kedua. Hal tersebut dikarenakan kedua brand ini yang paling laku, Trek dengan 1,727 units dan Electra 2,534 units.

Penyebab Trek lebih besar revenuenya dari Electra adalah karena Trek memiliki beberapa produk yang mahal atau variasi harganya yang lebih luas.

4. Toko

Kontribusi pendapatan dari toko Baldwin Bikes tidak pernah kurang dari 60%, bahkan naik jadi 72% di tahun 2019. Kondisi ini nunjukkin kalau operasional perusahaan nggak sehat karena hampir $\frac{3}{4}$ uang perusahaan hanya ngandelin dari toko ini aja. Sedangkan pada tahun 2019, toko lain yaitu Rowlett Bikes mengalami dua periode kosong tanpa penjualan sama sekali (Mei-Juli dan Nov-Des), sementara Santa Cruz juga tidak mencatatkan transaksi pada bulan Oktober.

5. Produk & Kategori

Mountain Bikes adalah kategori yang memberikan pendapatan paling besar dengan total hampir \$2,9 juta, tapi di tahun 2019 mengalami penurunan yang paling parah di antara semua kategori, yaitu 59% dibanding tahun sebelumnya. Produk Trek Slash 8 dari kategori ini jadi produk dengan revenue tertinggi selama periode laporan ini.

Terdapat beberapa peluang pada kategori lainnya yang belum dimanfaatkan secara optimal, contohnya adalah Road Bikes yang penjualan hanya turun 26,6% di 2019, jauh lebih rendah dibanding kategori lain. Sementara Electric Bikes dan Cyclocross Bicycles, meskipun total pendapatannya lebih kecil, dua kategori tersebut memiliki dua produk unggulan di top 10 produk selama periode laporan. Bahkan Trek Conduit+ dari Electric Bikes menjadi produk terlaris kedua dengan total revenue \$431,998 dan total units 144. Kategori-kategori ini bisa menjadi penyeimbang saat demand Mountain Bikes sedang fluktuatif. Ditambah dengan tren inovasi teknologi elektrik yang terus berkembang, potensi pendapatan dari Electric Bikes kemungkinan besar akan terus meningkat kedepannya.

6. Sales Tim

Terdapat gap besar antara staf penjualan. Marcelene dan Venita menjual 7 kali lebih banyak daripada yang lain. Ini terjadi karena mereka bekerja di Baldwin Bikes satu-satunya toko yang tetap aktif sepanjang tahun. Selain itu, toko ini selalu menjadi penyumbang terbesar bagi pendapatan perusahaan. Perlu dilakukan analisis lebih lanjut mengapa toko ini jauh lebih baik daripada yang lain. Ini berisiko karena perusahaan terlalu bergantung hanya pada satu toko dan beberapa orang.

// english

1. Yearly Trend & Performance

The business grew fast in 2017, with revenue increasing by 136%. In 2018, revenue went down a little by 22%. The highest revenue happened in April 2018, which was close to \$400,000. Every year, the business always showed growth in Q1.

But in 2019, the business dropped very badly, revenue fell by 46%, which means the company lost around \$1,36 million. This happened because 90% of customer activity slowly disappeared. Orders went down from 41 in March to only 4 orders at the end of the year.

2. Region (Customer Location)

About 69% of the company's revenue came from customers in New York. The problem is, in 2019, customers in many New York cities like Baldwinsville, Howard Beach, and New Rochelle stopped buying, some cities dropped 80% to 100%.

It got worse because California (20% market share) and Texas (11% market share) also dropped at the same time. San Lorenzo in California and Houston in Texas even dropped 100%. Because every region went down together, the company had no backup, and the cash flow collapsed completely.

3. Brand

Almost 60% of revenue depended on Trek. This became a big problem when Trek sales dropped 44% in 2019, the whole company felt it right away. Things got worse because other brands also dropped. Ritchey and Pure Cycles fell more than 70%.

However, Trek was still the number one brand by revenue, and Electra was second. This is because these two brands sold the most units, Trek sold 1,727 units and Electra sold 2,534 units. The reason Trek revenue is higher than Electra, even though Electra sold more units, is because Trek has more expensive products and a wider price range.

4. Store

Baldwin Bikes always contributed at least 60% of the company revenue, and in 2019, it went up to 72%. This shows the company is in an unhealthy situation because almost three quarters of the money came from just one store.

In 2019, Rowlett Bikes had two long periods with zero sales (May-July and November-December). Santa Cruz Bikes also had no sales in October.

5. Product & Category

Mountain Bikes is the category with the highest total revenue, almost \$2,9 million. But in 2019, it also had the worst drop among all categories, falling 59% compared to the previous year. The Trek Slash 8 from this category was the top product by revenue during the whole report period.

There are opportunities in other categories that have not been used well. Road Bikes only dropped 26.6% in 2019, which is much lower than the other categories. Electric Bikes and Cyclocross Bicycles, even though their total revenue is smaller, each have two products in the top 10 highest revenue products of the whole report period. Trek Conduit+ from Electric Bikes was the second best selling product with total revenue of \$431,998 and 144 units sold. These categories can help balance revenue when Mountain Bikes demand goes down. Also, since electric technology keeps growing, Electric Bikes revenue will likely keep increasing in the future.

6. Sales Team

There is a big gap between sales staff. Marcelene and Venita sold 7 times more than the others. This happened because they work at Baldwin Bikes, the only store that stayed active all year and always contributed the most to the company revenue.

More analysis is needed to understand why this store performs so much better than the others. This is also a risk because the company depends too much on just one store and a few people.

Recommendations:

// indonesia

1. Evaluasi Toko

Manajemen harus melakukan evaluasi pada toko Rowlett Bikes dan Santa Cruz untuk mencari penyebab pasti hilangnya laporan penjualan selama berbulan-bulan di tahun 2019 (seperti Mei-Juli di

Rowlett dan Oktober di Santa Cruz). Evaluasi ini harus mencakup faktor internal (ketersediaan stok dan sistem pelaporan) serta faktor eksternal (kompetitor wilayah), guna memastikan seluruh cabang dapat beroperasi aktif seperti Baldwin Bikes.

Selain itu, manajemen juga perlu melakukan evaluasi komparatif untuk memahami mengapa Baldwin Bikes mampu menjaga aktivitas transaksi yang stabil dibandingkan toko lainnya.

Hal ini bertujuan untuk menemukan apakah keberhasilan tersebut murni karena potensi pasar wilayah atau adanya keunggulan sistem operasional tertentu, sehingga perusahaan bisa menentukan strategi yang tepat untuk menghidupkan kembali performa toko di wilayah lain.

2. Ekspansi

Selama 4 tahun revenue perusahaan bergantung pada New York sebesar 60-70%, sementara California hanya 18-25% dan Texas 9-11%. Ketimpangan ini bikin perusahaan tidak punya buffer ketika NY turun, dan itulah yang terjadi di 2019.

Untuk mengurangi ketergantungan tersebut, ekspansi perlu diprioritaskan ke kota-kota di CA dan TX yang sudah terbukti punya demand, bukan kota-kota yang belum teruji. Berdasarkan data, San Angelo dan Harlingen di Texas serta Palos Verdes Peninsula di California masuk dalam top 15 kota dengan pendapatan tertinggi, artinya potensi pasarnya sudah ada. Setelah market share kedua negara bagian ini tumbuh melalui kota-kota tersebut, ekspansi bisa dilanjutkan ke kota-kota yang lebih kecil secara bertahap.

3. Diversifikasi Category Product

Pastikan porsi stok lebih banyak dan promosi yang tepat untuk Electric Bikes dan Road Bikes secara bertahap untuk diversifikasi di luar Mountain Bike. Karena kategori Road Bikes mencatatkan penurunan paling rendah di 2019, hanya 26,6%, menjadikannya kandidat yang kuat sebagai anchor category untuk menjaga kestabilan pendapatan saat Mountain Bikes sedang fluktuatif.

Sementara Electric Bikes punya potensi pertumbuhan jangka panjang yang kemungkinan besar sangat menjajikan, Trek Conduit+ dari kategori ini adalah produk terlaris kedua sepanjang periode laporan dengan total revenue \$431,998, dan tren inovasi teknologi elektrik yang terus berkembang kemungkinan besar akan terus mendorong permintaannya ke depan.

4. Prioritas Jangka Pendek

Dalam jangka pendek, fokus pemulihan sebaiknya diprioritaskan pada brand Trek dan Electra, karena dua brand ini yang paling diminati selama periode laporan hingga saat krisis 2019. Langkah konkretnya mencakup ketersediaan stok kedua brand ini di semua toko, memprioritaskan keduanya dalam aktivitas promosi, serta melatih staf penjualan untuk lebih menguasai product knowledge Trek dan Electra.

Sementara brand lain seperti Strider, Ritchey, dan Heller perlu dievaluasi ulang relevansinya, mengingat ketiganya hanya terjual kurang dari 11 unit di 2019.

// english

1. Store Evaluation

Management must evaluate Rowlett Bikes and Santa Cruz Bikes to find out why they had no sales for months in 2019, like May to July at Rowlett and October at Santa Cruz. The evaluation should

look at internal factors (stock availability and reporting systems) and external factors (local competitors), so all stores can eventually run as well as Baldwin Bikes.

Management also needs to do a comparison study to understand why Baldwin Bikes was able to keep selling while the other stores could not. The goal is to find out whether Baldwin success came from having a better location and market, or from having a better way of running the store. With that answer, the company can decide the right strategy to bring the other stores back to life.

2. Expansion

For four years, the company revenue depended on New York for 60-70%, while California was only 18-25% and Texas was only 9-11%. This imbalance left the company with no backup when New York dropped, and that is exactly what happened in 2019.

To reduce this dependency, the company should expand to cities in California and Texas that already have proven demand, not cities that are untested. Based on the data, San Angelo and Harlingen in Texas, and Palos Verdes Peninsula in California are in the top 15 cities by revenue, which means customers there are already willing to buy. After market share in these two states grows through these cities, the company can slowly expand to smaller cities as well.

3. Product Category Diversification

The company should make sure Electric Bikes and Road Bikes get more stock and the right promotions, to slowly diversify away from depending only on Mountain Bikes. Road Bikes only dropped 26.6% in 2019, much lower than other categories, which makes it a strong choice as an anchor category to keep revenue stable when Mountain Bikes demand goes up and down.

Electric Bikes also have a very promising long term opportunity. Trek Conduit+ from this category was the second best selling product in the whole report period with \$431,998 in revenue. And since electric technology keeps developing, demand for Electric Bikes will likely keep growing in the future.

4. Short Term Recovery Priority

In the short term, the company should focus on Trek and Electra, the two brands that kept selling even during the 2019 crisis. The specific steps include making sure both brands are always available in all stores, giving them priority in promotions, and training sales staff to have deeper product knowledge about Trek and Electra products.

Meanwhile, brands like Strider, Ritchey, and Heller need to be reviewed, all three sold fewer than 11 units in 2019. The company should consider reducing stock for these brands and moving that space and budget to brands that have proven results.
